

#### EM converterLED BASIC NiCd/NiMH 250 V

BASIC series

#### Product description

- Emergency lighting LED Driver for manual testing
- For self-contained emergency lighting
- For LED modules with a forward voltage of 50 – 250 V
- Low profile casing (21 x 30 mm cross-section)
- For luminaire installation
- 5-year guarantee

#### Properties

- Non maintained operation
- 1 or 3 h rated duration
- Operating time selectable with plug (duration link)
- Compatible with all dimmable and non-dimmable constant current LED Driver (see chapter 5.3)
- 3-pole technology: 2-pole LED module changeover and delayed power switching for the LED Driver
- Automatic shutdown of output if LED load is out of range
- Constant power output
- Maximum light output for all LED modules
- Electronic charge system
- Deep discharge protection
- Short-circuit-proof battery connection
- Polarity reversal protection for battery

#### Batteries

- High-temperature cells
- NiCd or NiMH batteries
- D, Cs or LA cells
- 4-year design life
- 1-year guarantee
- For battery compatibility refer to chapter 7.1

**Standards**, page 4

**Wiring diagrams and installation examples**, page 5

### EM converterLED BASIC NiCd/NiMH 250 V

BASIC series

Note: LED Driver supplied with duration link in 3 hours position. Remove duration link for 1 hour duration. Duration link must be set before battery and mains connection.

#### Technical data

Rated supply voltage	220 – 240 V
Mains frequency	50 / 60 Hz
LED module forward voltage range	50 – 250 V
Output current	see chapter 5.2
Time to light	< 0.25 s from detection of emergency event
Overvoltage protection	320 V (for 48 h)
U-OVT (including open- / short-circuit and double load)	280 V
Max. open circuit voltage	280 V
Battery charging time	24 h <sup>①</sup>
Ambient temperature range ta	-5 ... + 55 °C
Max. casing temperature tc	75 °C
Mains voltage changeover threshold	according to EN 60598-2-22
Type of protection	IP20
Dimensions LxWxH	179 x 30 x 21 mm

#### Ordering data

## 1. Standards

- EN 61347-1
- EN 61347-2-13
- EN 61347-2-7
- EN 55015
- EN 61000-3-2
- EN 61547
- EN 60068-2-64
- EN 60068-2-29
- EN 60068-2-30
- EN 62384
- according to EN 50172
- according to EN 60598-2-22

### Meaning of marking

Double or reinforced insulation for built-in electronic LED Drivers. The control gear relies upon the luminaire enclosure for protection against accidental contact with live parts. The double or reinforced insulation is given between mains and LED, Battery, Test switch and Indicator LED.

### 1.1 Glow-wire test

according to EN 61347-1 with increased temperature of 850 °C passed.

### 1.2 Isolation and electric strength testing of luminaires

Electronic LED-Drivers can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with 500 V<sub>DC</sub> for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The isolation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1,500 V<sub>AC</sub> (or 1,414 x 1,500 V<sub>DC</sub>). To avoid damage to the electronic devices this test **must not be conducted**.

## 2. Thermal details and life-time

### 2.1 Life-time

Average life-time 50,000 hours under rated conditions with a failure rate of less than 10 %. Average failure rate of 0.2 % per 1,000 operating hours.

#### Expected life-time

	tc	65 °C	70 °C	75 °C
<b>EM converterLED BASIC 203 NiCd/NiMH 250V</b>	life-time	> 100,000 h	73,000 h	51,000 h
<b>EM converterLED BASIC 204 NiCd/NiMH 250V</b>	tc	65 °C	70 °C	75 °C
	life-time	> 100,000 h	87,000 h	61,000 h
<b>EM converterLED BASIC 205 NiCd/NiMH 250V</b>	tc	65 °C	70 °C	75 °C
	life-time	> 100,000 h	79,000 h	56,000 h

The emergency lighting LED Driver is designed for a life-time stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design. If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

## 3. Installation / Wiring

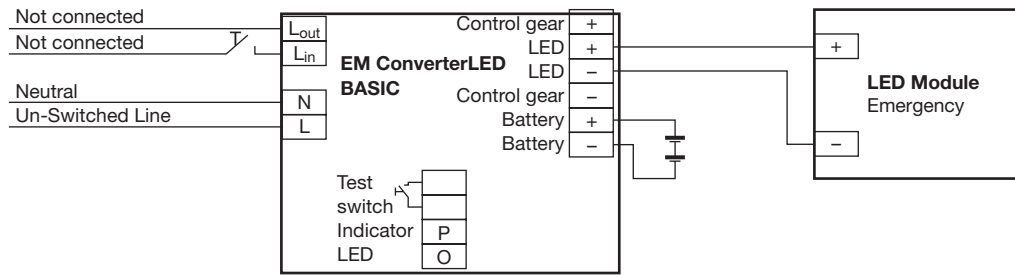

### 3.1 Wiring diagram

One or more LED modules with a total forward voltage of 50 to 250 V can be connected to the EM converterLED 250V module. These LED module(s), marked with "Emergency" are operated in emergency mode from the associated battery. In normal mains mode all LED modules are operated by the LED Driver from the mains supply.

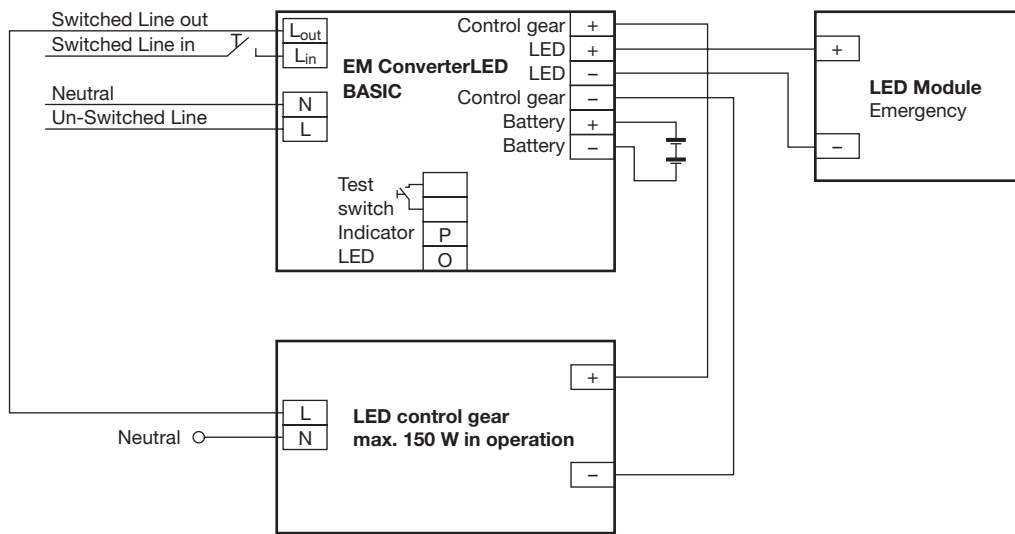

Use of the test switch:

For checking the device function press the test switch for a minimum of 3 seconds.

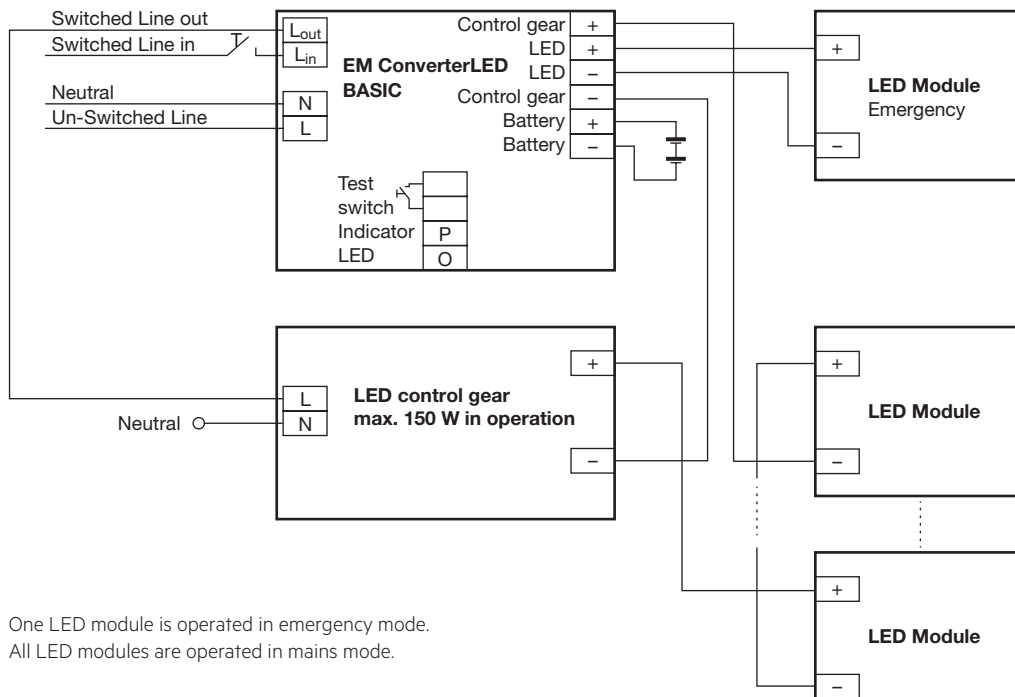

**EM converterLED BASIC with one LED module for non-maintained emergency operation**

**EM converterLED BASIC with a standard LED Driver and one LED module for mains and emergency operation**

**EM converterLED BASIC with a standard LED Driver and series operation of LED modules**

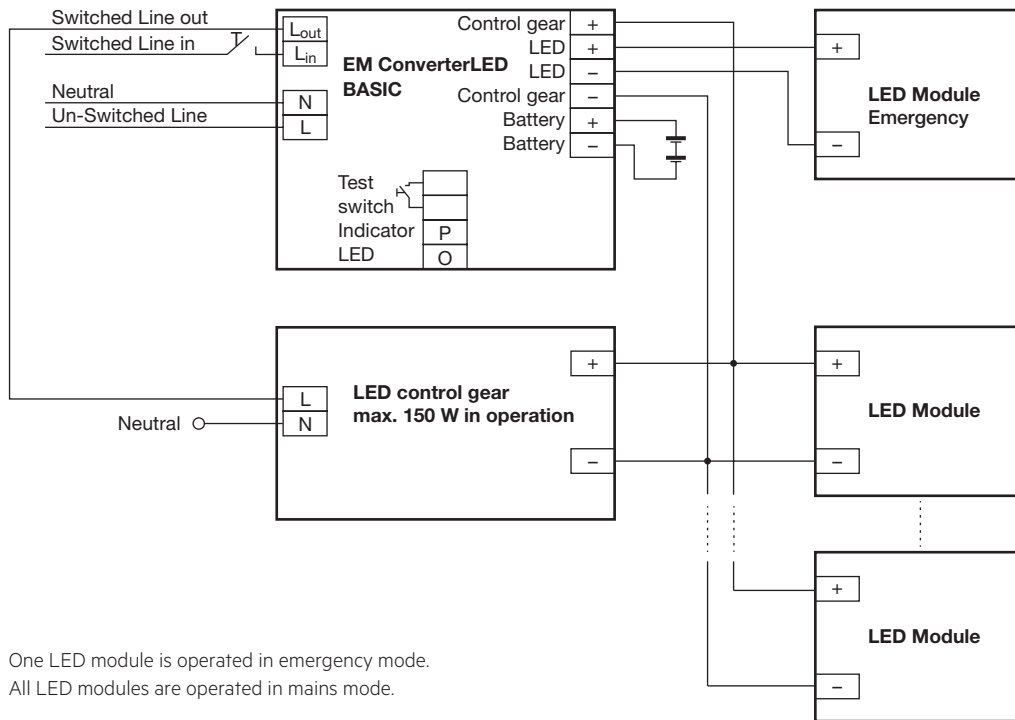

One LED module is operated in emergency mode.  
All LED modules are operated in mains mode.

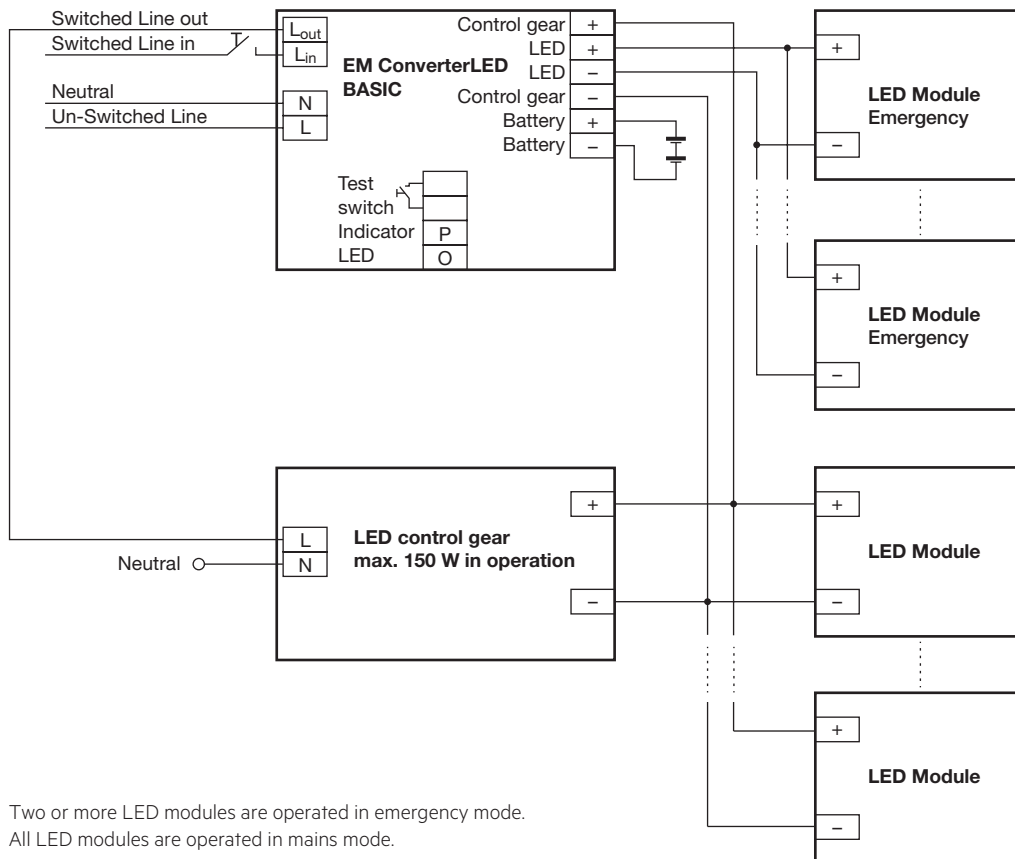

**EM converterLED BASIC with a standard LED Driver and series operation of LED modules**

**EM converterLED BASIC with a standard LED Driver and parallel operation of LED modules**

**EM converterLED BASIC with a standard LED Driver and parallel operation of LED modules**

Two or more LED modules are operated in emergency mode.  
All LED modules are operated in mains mode.

**3.2 Wiring type and cross section**

Solid wire with a cross section of 0.5 – 1.5 mm<sup>2</sup>. Strip 8 – 9 mm of insulation from the cables to ensure perfect operation of terminals.

Wiring: LED module/LED Driver/supply

**3.3 Loose wiring**

Loosen wire through twisting and pulling or using a Ø 1 mm release tool

**3.4 Wiring guidelines**

- The output to the LED is DC but has high frequency content, which should be considered for good EMC compliance.
- LED leads should be separated from the mains connections and wiring for good EMC performance.
- Maximum lead length on the LED terminals is 3 m. For a good EMC performance keep the LED wiring as short as possible.
- The secondary wires (LED module) should be routed in parallel to ensure good EMC performance.
- Maximum lead length for the Test switch and Indicator LED connection is 1 m. The test switch and Indicator LED wiring should be separated from the LED leads to prevent noise coupling.
- Battery leads are specified with 0.5 mm cross section and a length of 1.3 m
- To avoid the damage of the control gear, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.)

To ensure that a luminaire containing LED emergency units complies with EN 55015 for radio frequency conducted interference in both normal and emergency mode it is essential to follow good practice in the wiring layout.

Within the luminaire the switched and unswitched 50 Hz supply wiring must be routed as short as possible and be kept as far away as possible from the LED leads. Through wiring may affect the EMC performance of the luminaire.

The length of LED leads must not be exceeded. Note that the length of the leads from the EM converterLED to the LED modules is added to the length of the leads from the LED Driver to the EM converterLED module when considering the max. permitted lead length of the LED Driver. Leads should always be kept short as possible.

### 3.5 Maximum lead length

LED	3 m
Status indication LED	1 m
Batteries	1.3 m

### 3.6 Use of different phases

The use of different phases for switched line and unswitched line is allowed. When using different phases, the unswitched line must fail if the switched line fails. This is required to assure correct switching into emergency mode. It can be realised with a relay.

## 4. Mechanical values

### 4.1 Housing properties

- Casing manufactured from polycarbonate.
- Type of protection: IP20

### 4.2 Mechanical data accessories

LED status indicator

- Green
- Mounting hole 6.5 mm diameter, 1 – 1.6 thickness
- Lead length 0.3 m / 0.6 m / 1.0 m
- Insulation rating: 90 °C
- Plug connection

Test switch

- Mounting hole 7.0 mm diameter
- Lead length 0.55 m
- Plug connection

Battery leads

- All NiCd and NiMH 2 Ah:
  - Quantity: 1 red and 1 black
  - Length: 1.3 m
  - Wire type: 0.5 mm<sup>2</sup> solid conductor
  - Insulation rating: 90 °C
- NiMH 4 Ah:
  - Quantity: 1 red and 1 black lead with plug-in connection suitable for the plug-in connection of the battery
  - Total length: 1,000mm (100 mm on battery side / 900 mm on device side)
  - Wire type: 0.5mm<sup>2</sup> solid conductor
  - Insulation temperature rating: 90°C

Battery end termination

- All NiCd and NiMH 2 Ah: push on 4.8 mm receptacle to suit battery spade fitted with insulating cover
- NiMH 4 Ah: lead with connector

Module end termination

8.0 mm stripped insulation

Two-piece batteries

- All NiCd and NiMH 2 Ah: are supplied with a 200 mm lead with 4.8 mm receptacle at each end and insulating covers to connect the separate sticks together.
- NiMH 4 Ah: are supplied with a 100mm firmly welded lead to connect the separate sticks together. A lockable plug connection is used to connect the battery on the battery side. On the device side the cable has a strip length of 8 mm from factory

## 5. Electrical values

### 5.1 Maximum loading of automatic circuit breakers

Automatic circuit breaker type	B10	B13	B16	B20	C10	C13	C16	C20	Inrush current	
Installation $\varnothing$	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	$I_{max}$	time
<b>EM converterLED BASIC 203 NiCd/NiMH 250V</b>	90	130	130	130	180	260	260	260	10 A	120 $\mu$ s
<b>EM converterLED BASIC 204 NiCd/NiMH 250V</b>	90	130	130	130	180	260	260	260	10 A	120 $\mu$ s
<b>EM converterLED BASIC 205 NiCd/NiMH 250V</b>	90	130	130	130	180	260	260	260	10 A	120 $\mu$ s

### 5.2 Typ. LED current/voltage characteristics

The LED current in emergency mode is automatically adjusted by the EM converterLED module based on the total forward voltage of the LED modules connected and the associated battery. The start of the LED in emergency mode does not result in a current peak.

EM converterLED BASIC 203 NiCd/NiMH 250V

 LED current at nominal battery voltage and max. battery discharge current

### 5.3 LED Driver compatibility

The EM converterLED emergency unit use 3 pole technology and is compatible with most LED Drivers on the market, however it is important to check that the rating of the LED Driver does not exceed the values specified below:

- The max. allowed output current rating of the associated LED Driver is 2.4 A peak (current rating of switching relays of EM converterLED)
- The max. allowed inrush current rating of the associated LED Driver is 60 A peak for 1 ms or 84 A for 255  $\mu$ s (inrush current rating of switching relay of EM converterLED)
- The max. allowed output voltage of the associated LED Driver applied to the EM converterLED output is 450V (voltage withstand between adjacent contact of the single switching relay of the EM converterLED)
- The max. allowed LED load of the associated LED Driver is 150 W in operation. The load must be an LED module.

## 6. Functions

### 6.1 Duration link selection

Duration	Usage duration link
3 h	 With link
1 h	 Without link

Emergency lighting LED Driver supplied with duration link in 3 hours position.

The position of the link will only be read on first power up. If it is changed afterwards both the battery and mains supply must be disconnected for 10 seconds to enable the EM converterLED to read the new link position on reconnection of the battery and mains. It will lead to a false battery failure indication if the link is changed after installation without this reset.

## 7. Battery data

### 7.1 Battery selection

EM converterLED BASIC, 1 / 3 h

Charge voltage range <sup>®</sup>								0.9 – 1.65 V per cell	
Discharge voltage range								1.65 – 0.90 V per cell	

<sup>®</sup> The battery will be charged below 0.9 V. The EM converterLED will indicate a battery fault.

The emergency lighting LED Driver will recharge the battery normally after running the test of 61347-2-7 CL 22.3 (abnormal operating conditions).

**7.3 Accu-NiCd****4.2 / 4.5 Ah**

International designation	KRMU 33/62
Battery voltage/cell	1.2 V
Cell type	D
Case temperature range to ensure 4 years design life	+5 °C to +55 °C
Max. short term temperature (reduced life-time)	70 °C
Max. number discharge cycles	12 cycles per year plus 4 cycles during comissioning
Max. storage time	12 months

**7.4 Accu-NiMH****2.2 Ah**

International designation	HRMU 23/43
Battery voltage/cell	1.2 V
Cell type	Cs
Case temperature range to ensure 4 years design life	+5 °C to +50 °C
Max. short term temperature (reduced life-time)	70 °C
Max. number discharge cycles	4 cycles per year plus 30 cycles during comissioning
Max. storage time	12 months

**4.0 Ah**

International designation	HRMU 19/90
Battery voltage/cell	1.2 V
Cell type	LA
Case temperature range to ensure 4 years design life	+5 °C to +45 °C
Max. short term temperature (reduced life-time)	70 °C
Max. number discharge cycles	4 cycles per year plus 30 cycles during comissioning
Max. storage time	12 months

**7.5 Wiring batteries**

To inhibit inverter operation disconnect the batteries by removing the connection at battery side.

For further informations refer to corresponding battery datasheet.

**7.6 Storage, installation and commissioning**

Relevant information about storage conditions, installation and commissioning are provided in the battery datasheets.

**8. Miscellaneous****8.1 Maximum number of switching cycles**

All LED Drivers are tested with 50,000 switching cycles.  
The actually achieved number of switching cycles is significantly higher.

**8.2 Additional information**

Additional technical information at [www.tridonic.com](http://www.tridonic.com) → Technical Data
